1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-2 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Rejection ground continues to be those set forth in the previous office action (Paper dated 11/17/06, paragraph 3).

2. Applicants' arguments filed on 12/18/06 have been fully considered but they are not persuasive.

Applicants, in their remarks, argue that:

"[r]eviewing the subject matter of claim 1, it is clear that the invention of claim 1 results in a useful, tangible and concrete result. To wit, claim 1 recites the feature of 'determining a floating point result at the processor for the monotonic operation.' The claimed 'floating point result' that is determined is concrete in that its repeatability is both repeatable and predictable. It further is tangible as the floating point result is determined at a processor and thus is part of the processor, which is tangible and not abstract. Further, as evidenced by the number and variety of floating-point processors which produce floating point results for any of a variety of applications, such as, for example, video games and mathematical and scientific modeling programs, the claimed 'floating point result' is clearly useful. Thus, the final result achieved by the claimed invention of claim 1, the '**floating point result**,' is '**useful, tangible, and concrete**' and thus claim 1 meets the **statutory requirement of § 101**. Reconsideration and withdrawal of this rejection therefore is respectfully requested" (emphasis added).

With respect to the argument, the examiner carefully reviews Applicant's claimed invention. It is noted that applicant hasn't pointed out how/why the claim produces a

useful, concrete, and tangible result. If the claim as a whole is reasonably interpreted as just solving a mathematical algorithm rather than reciting a practical application of the algorithm which produces a **useful, concrete and tangible result**, then it would be non-statutory. It would appear to be **concrete** and **tangible** in the context of the claim; however, the **useful** result appears lacking. Therefore, the rejection is still proper.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
